Biology and
Chemistry**

Keyword Index, Volume 31 (2007)

- ACE2, 134
AcrB, 115
Algorithm, 173
Amino acid propensities, 389
Amino acid property, 163
Amyloid fibril formation, 373
Analytical solution, 36
Antibody neutralization, 129
Aptamer, 11
Array data type, 143
Artificial neural network, 373
- Background correction, 92
Bacterial clustering, 328
Bayesian classifier, 355
Bayesian network, 361
Bee toxicity, 57
Beta-barrel family, 61
Binary encoding strategy, 233
Bioinformatics, 82
Biomolecular regulatory network, 347
Brownian dynamics, 110
- Cancer detection, 275
Cancer gene activation heterogeneity, 65
Carbon nanotubes, 127
Carcinogenesis, 275
Chemotactic aggregation, 328
Chemotactic sensitivity, 328
Chiral vector, 127
Chromosome segregation, 257
Circular code, 36
Classification, 226
Climate change, 294
Clustering, 265
Clustering algorithm, 148
Codon, 36
Cold adaptation, 163
Complex reactions, 99
Conformational changes, 196
Consensus approach, 48
Contact map prediction, 233
Convex optimization, 347
Coral growth, 294
- Data pipelining, 305
Data streaming, 305
Database schema, 143
De Young–Keizer model, 99
Diagnostics, 48
- Differential gene expression detection, 65
Differentially expressed, 178
Distance function, 148
DNA compaction, 257
DNA microarray, 92, 361
DNA molecules in shear flow, 110
Drug design, 186
Dumbbell model, 110
Dynamic programming algorithm, 384
- Effect of internal viscosity, 110
Endonuclease I, 163
Energy decomposition, 373
Enzyme, 226
Escherichia coli, 257
Estimation, 347
Evidence networks, 222
Evolution model, 36
Expertness assessment, 44
Exploratory analysis, 222
- False discovery rate, 65
Fold complexity, 151
Frameshift signal, 298
Free energy, 186
Functional data analysis, 265
Functional domain composition, 226
- G protein-coupled receptor, 246
Gastroenterology, 275
Gene, 36
Gene expressions, 178
Gene network, 361
Gene networks, 239
Genetic algorithm, 233
Genotype information, 288
Gillespie algorithm, 99
Graph theory, 173
Grid services, 305
- Hadley, 294
Halophilic enzymes, 163
Haplotype reconstruction, 148, 288
HBV, 124
Hepatitis C virus, 233
Homolgy modeling, 186
Hybrid learning, 361
- Identification, 124
Image analysis, 294

- Inference, 239, 347
Information theory, 384
Interleukin-1 beta, 196
Ion channel, 99
Iron homeostasis, 1
Isotope labeling, 215
Iterative local-exhaustive search algorithm, 288

Kernel integration, 138

Ligand binding prediction, 115
Linear models, 178

Machine learning, 373
Mass spectrometry data analysis, 215
Mathematical analysis, 11
MEC model, 148
Metabolic pathways, 1
Microarray, 65, 143, 178
Microarray gene expression, 48
MicroRNA, 124
MicroRNA (miRNA), 207
Mistranslation frequencies, 335
MM-PBSA, 186
Model, 328
Molecular modeling, 196
Monte Carlo, 99
Motif, 378
Motif search, 207
Mutation matrix, 36
Mycobacterium tuberculosis, 82

Nicotinic acetylcholine receptor, 72
Noise, 239
Non-conventional toxins, 72

Oncogene, 275
Ontology, 305
Optimal descriptors, 57
Optimization, 239
Ordinary differential equations, 239
Outlier, 65

Pedigree likelihood, 173
Peeling, 173
Petri nets, 1
Phylogenetic distance, 36
Physicochemical property, 246
PostgreSQL, 143
Predictive modeling, 127
Principal component analysis, 265
Probe secondary structure, 92
Profile hidden Markov model, 246
Prognostics, 48
Programmed ribosomal frameshift, 298
Prokaryotic cell division, 257
Promoter, 207
Protein accessibility prediction, 384
Protein design, 129
Protein knots, 151
Protein structure, 389
Protein structure analysis, 378
Protein structure prediction, 384
Protein-protein interactions, 196, 222
Protein-receptor complex, 196

QSAR, 57
Quantitative proteomics, 215

Radial basis function neural networks, 233
Receptor recognition, 129
Receptor-binding specificity, 134
Recoding, 298
Regulatory motif, 207
Remote homology detection, 138
Ribosome kinetics, 335
RND-proteins, 115
Robust regression, 65
ROV, 294

7S core complex, 378
SARS coronavirus, 129, 134
Sea perch, 378
Secondary structure prediction, 373, 389
Secondary structure prediction engines, 44
SELEX, 11
Self-organization, 257
Self-self hybridizations, 178
Semantic web, 305
Sequence, 61
Sequence analysis, 163
Simulation, 328
Single global propensity, 44
SMILES, 57
Snake three-finger toxins, 72
SNARE proteins, 378
SNP fragment, 148, 288
Software, 173
Sparsity, 347
Spike protein, 129, 134
Splice variant, 246
Spline, 347
SST, 294
Steered MD, 186
Stochastic model, 36
Stochasticity, 99
Structural bioinformatics, 134
Structural class of proteins, 389
Subcellular localization, 138
Submersible, 294
Support vector machine, 138, 226
Survival prediction, 275
Symmetry, 61

Tandem MS triggering, 215
Target, 124
Temperate mycobacteriophage, 82
Tertiary structure, 61
Time-course expression data, 355
Time-course gene expression, 265
Time-delay, 239
Toxin-receptor complex, 72
Transcription factor binding sites, 207
Transcription factor targets, 355
Translation, 298, 335
Transmembrane domain, 246
Trinucleotide, 36
tRNA availability, 335

Visual analytics, 222
Visual programming, 305

Weak toxins, 72
Web services, 305
Workflow technology, 305
